

# The volume of hydrocarbons discovered in 2017 is the highest in the last 5 years

Published June 27, 2018

**Discovered Hydrocarbons  
(2P Reserves)**

Since 2013, 49 fields have been discovered, incorporating reserves for a total of 917 MMBBL of oil and 2,041 BCF of gas.<sup>1</sup>

In 2017, PEMEX announced the discovery of the field *Ixachi*, incorporating reserves of 65.6 MMBBL of oil and 761.8 BCF of gas. This represented 37% of the total volume of gas discovered between 2013 and 2017.<sup>2</sup>

In 2023, *Ixachi* will reach its peak of production, with 22 KBPD of oil and 233 MMCFD of gas.<sup>3</sup>

MMBBL: millions of barrels, BCF: billion cubic feet, MMBOE: million barrels of oil equivalent, KBD: thousand barrels per day, MMCFD: million cubic feet per day.
