

# 84% of 1P oil reserves in Mexico are in Southeast Basin

## Distribution of Proven Reserves by Basin and Reserves-to-Production Ratio

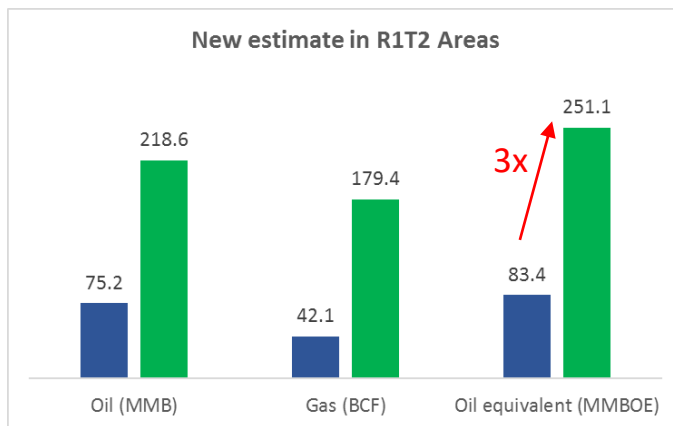

Proven reserves (1P) in Mexico reached 6,424.2 MMB of oil and 10,022.4 BCF of gas in 2018.

In addition, the ratio of the amount of proven reserves (1P) to national production increased in 2018 from 2017:

- In the case of oil, the ratio increased from 8.9 to 9.1 years;
- In the case of gas, it increased from 4.9 to 5.4 years.

**Offshore:** R1T2 (with new estimate)  
**Onshore:** R1T3, R2T2, R2T3

The new estimate of 1P reserves in areas tendered in the Second Tender of Round 1 (R1T2) contributed to the tripling of the volume of reserves in said areas, from 83.4 to 251.1 MMBOE.

Discoveries in the Veracruz and Southeast Basins contributed in the order of 153.8 MMBOE.
