

# Natural Gas imports exceeded national production

Published on August 30, 2017

- In June 2017, dry natural gas production stood at 3,164 million cubic feet per day (MMcfd), while imports totaled 5,027 MMcfd, an increase of 3.6% over the previous month.
- Since 2016, the volume of imported natural gas is higher than domestic production.
- The differential between imports and production went from 709 MMcfd in 2016 to 1,863 MMcfd in June 2017. In other words, the gap between imports and production increased by 162%.
