

Ku-Maloob-Zaap achieves more than 50% reduction in natural gas flaring and venting

Published on August 22, 2017

Flaring and venting of natural gas in the asset Ku Maloob Zaap

- The asset Ku-Maloob-Zaap, is composed of the fields: Ayatsil, Bacab, Ku, Lum, Maloob and Zaap. In June 2017, 44% of the national oil production came from this asset.
- On November 15, 2016, the National Hydrocarbons Commission sanctioned PEMEX for non-compliance with the gas utilization targets for this asset. As a result, PEMEX presented a program of corrective actions amounting 3,028 million dollars for the period 2016-2019.
- As a result of corrective actions, in the first half of 2017 a reduction in natural gas flaring and venting of 55% was achieved, going from 197 million cubic feet per day (MMcfd) in January to 88.3 MMcfd in June.
