

ENI México becomes the first private company to produce hydrocarbons in shallow waters in Mexico

On September 30, 2015, Mexico held the bid presentation and envelope opening for Round 1 Tender 2, which resulted in the awarding of three oil and gas contracts¹.

- The company ENI MÉXICO, operator of Contract CNH-R01-L02-A1/2015, reported in July 2019, production of 5.42 thousand barrels per day from the well Miztón-2DEL, making it the first private company to produce hydrocarbons in shallow waters in Mexico.
- Oil production from Contract CNH-R01-L02-A1/2015 is equal to 54% of the total production generated from contracts awarded in the bidding round through the month of July 2019, and 6% of total production from all contracts.
- According to the Development Plan presented by the operator and approved by the Commission, the operator hopes to reach a peak of production of 90 barrels per day of oil and 60 million cubic feet of gas per day in the last quarter of 2021.
- Income to the State is estimated to reach US\$4.861 billion dollars during the next five years, and US\$12.372 billion during the contractual period².
- Production from all contractual areas reached 85 thousand barrels per day in July 2019, equivalent to 5% of national production.

Notes:

¹ Corresponds to contracts tendered for Areas 1, 2 and 4

² 83.75% of Operating Profit in favor of the State, offered during the bidding round held by the CNH.
