## Production of liquids in Priority Fields, New Fields and Fields in Contracts

Production of liquids (crude oil and condensates) observed since 2019 to 2021. The production of the Priority Fields is presented in blue range, New PEMEX's Fields in gray and Fields in Contracts in green.

Source: CNH, National Oil and Gas Production Report as of December 2021.

In the oil industry, a Field consists of one or several reservoirs, grouped or related according to geostructural aspects and stratigraphic conditions that are studied and developed with the aim of achieving hydrocarbons production. Between 2019 and 2021, 28 fields were counted in Mexico with new production of liquids; which can be classified into the following 3 categories: Priority Fields, New PEMEX's Fields and Fields in Contracts.

The Priority Fields of Petróleos Mexicanos (PEMEX) are a set of fields developed with the purpose of contributing to the national production of hydrocarbons; to the date, the National Hydrocarbons Commission (CNH) has approved a total of 17 Development Plans, and their modifications, related to these projects. Moreover, from 2019 to 2021, PEMEX has incorporated 9 New Fields to the national production of hydrocarbons. Meanwhile, 4 Fields in Contracts started production: Mizton field (CNH-R01-L02-A1/2015 operated by Eni Mexico), Hokchi field (CNH-R01-L02-A2/2015 by Hokchi Energy) and Pokoch and Ichalkil fields (CNH-R01-L02-A4/2015 by Fieldwood Energy E&P México).

To December 2021, the production of liquids in these projects amounts to 319 thousand barrels per day (kbbpd), almost doubling that of December 2020 (164 kbbpd). Among the Priority Fields with the highest production of liquids stand out Ixachi, Mulach and Octli with 31, 26 and 21 kbbpd, respectively. While for the New Fields stand out Quesqui, Itta and Tlamatini with 77, 16 and 14 kbbpd, respectively. As for the Contracts, the Hokchi, Miztón, Pokoch and Ichalkil fields report production of liquids of 18, 13, 4 and 2 kbbpd, respectively.

**Notes:**

- 1/ For more information, please visit the CNH web site <https://hidrocarburos.gob.mx/statistics/>
- 2/ Of 17 Priority Fields, 14 have had production as of December 2021.
- 3/ Refers to fields operated by PEMEX with production starting since 2019 and maximum monthly production of more than one thousand barrels per day.
- 4/ Considers Contracts with fields that started production since 2019 and maximum monthly production of more than one thousand barrels per day. The total production of liquids in Contracts amounts to 157.8 kbbpd as of December 2021.
